Question (a) (turn the given CFG into CNF)

Given the CFG:

S → XYZ | YZ
X → **y**Y | **x**
Y → **y** | X
Z → **z**
W → **x**X | **yy**

2. step – remove unit productions: (**2 points**)

S → XYZ | YZ
X → **y**Y | **x**
Y → **y** | **y**Y | **x**
Z → **z**
W → **x**X | **yy**

1. step – remove ε-productions: (**1 point**)
there are no such productions.

3. step – remove variables that don't produce strings of all terminals: (**1 point**)
there are no such variables.

4. step – remove »unreachable« variables:
variable W is »unreachable« (**2 points**)

S → XYZ | YZ
X → **y**Y | **x**
Y → **y** | **y**Y | **x**
Z → **z**

5. step – Chomsky Normal Form (CNF):

a) Terminals → Variables: (**2 points**)

S → XYZ | YZ
X → AY | **x**
Y → **y** | AY | **x**
Z → **z**
A → **y**

b) »Shortening«: (**2 points**)

Question (a) (conversion to 3-CNF)

There are 3 Boolean variables, so direct conversion to 3-CNF is possible (using the truth table).

Truth table: (**5 points**)

A	B	C	AB + C
T	T	T	T
T	T	F	T
T	F	T	T
T	F	F	F
F	T	T	T
F	T	F	F
F	F	T	T
F	F	F	F

Falsifying variable assignments: (**5 points**)

(**A** = F, **B** = T, **C** = F),

(**A** = F, **B** = F, **C** = F).

Resulting expression in 3-CNF: (**5 points**)

(–A + B + C) (A + –B + C) (A + B + C)

Question (b) (reduction from 3-SAT to VC)
